1	general	The current version of this standards contents are seemed to be remained as Furthermore, this standard has not been s supposed that there are not so many expe Therefore, even if this document is revis with other documents such as SSR-3 compiled as <u>an addendum</u> to the current a	is well developed and the substantial it is in accordance with the proposal. so far since publication in 2012, and it is priences of applications accumulated. ed, it is sufficient to keep a consistency b, and the revised portion should be safety guide.			X	We agree that the document is comprehensive but it refers to obsolete references and needs to be revised completely. MS have provided significant feedback on its application and use in research reactors organizations. It will be impractical to compile the revisions as an addendum to the current safety guide.

Japan NUSSC Comments on DPP-DS511 "Use of a Graded Approach in the Application of the Safety Requirements for Research Reactors"

DS 511 DPP "Use of a Graded Approach in the Application of the Safety Requirements for Research Reactors",

Version 01/ Step 3, 2017-07-31
